

**Vodafone R&D –
Proposed *Breakthrough* since 2006**

Semantic Search – Next Big Idea

1/31/08 Vodafone R&D Leader1: Razz – You have a search related product. It may seem totally illogical but my job would be easier if you were invested in by Google.

12/18/09 Vodafone R&D Leader1: History is our R&D guys looked at it, but it was so far out of the ball park of comprehension [...]. It's in the area of semantic search a method and system for searching and matching/negotiating needs/requests using active agent AI. it goes way beyond simple search we are all familiar with today.

6/18/10 Vodafone R&D Leader1: Paco (*VF R&D Leader 2*) took a look a few years ago but to be honest I don't think we were able to fully appreciate the concept.

June 18, 2010 Vodafone R&D Leader1: (Razz) - I had an interesting conversation with David P. (*Vodafone R&D Leader4*) about mobile service brokerage and semantic like search which began to sound a lot like what you have been proposing for quite some time now. David is leading a programme in Vodafone Group R&D looking at this area

Vodafone R&D: *Competence, Responsibility, Accountability?*

NOTE: What is the meaning of "***leading a program in R&D looking at this area***"?...What about all the information I had provided Vodafone since 2006 – for a scope which was never observed/honored...to the contrary?

What about the source code I had provided VF R&D in order to help with their commitment for correcting their mistake which invalidated the due diligence process?

Is Vodafone R&D benefiting – in 2010 - from acquiring my IP – since 2006 – using my IP in order to "re-invent"/claim author-rights for something I had already invented & presented to Vodafone R&D – for evaluation & consideration for business opportunity, under NDA – since 2006?
